## QUANTI PANELS

A high-quality acoustic panel similar to the PREMIUM series, but with only a 9 mm MDF core and a slightly narrower profile. On the back of the panels, there is a 9 mm polyester board made from recycled plastic. The QUANTI series can be installed in all rooms, except wet rooms. Acoustic panels in the QUANTI series are available in the sizes 18x520x2440mm and 18x520x3000mm.

## SOUND ABSORPTION

The long reverberation time in a room without any acoustic solutions can be reduced using various materials with documented sound absorption properties. Use large surfaces such as walls and ceilings – both will reduce the reverberation time when installing materials with documented sound absorption properties such as acoustic panels.

## WHY FIBROTECH'S ACOUSTIC PANELS REDUCE SOUND

The narrow wood strips are installed on a 9 mm polyester panel that does not reflect sound the way hard material would. The thick polyester backing absorbs sound and improves room acoustics by reducing reverberation time and is well attached with several clamps to avoid any loose ends. The polyester backing contains 99% Recycled post-consumer Polyester.
